Las Cruces Monthly Weather

Weather stations record weather data, including temperature, precipitation (rain, hail and snow), and wind speeds, several times a day. The National Oceanic and Atmospheric Administration (NOAA) collects the data from these weather stations and calculates monthly and annual summaries of weather variables like total precipitation and average temperatures. When you compare weather over many years, you can understand the climate, or the long-term patterns in weather for this location. The table below shows data from a weather station at New Mexico State University in Las Cruces, NM where weather data have been collected since the 1870's. This data set includes monthly precipitation and the average monthly temperature.
